Lab 5: Sheets: Turn a Messy Export into a Dashboard

> 24 rows go in. If 24 rows come out, Spark missed the duplicate and you caught it.

Your goal

Develop a working dashboard from raw exports, and verify it by counting (LO2).

The story so far

Your enquiries live in an export nobody reads. You need to see where leads come from before launch, and you need to trust the numbers.

You will deliver

☐ Northstar-Launch-Dashboard in Sheets: 23 leads, formulas and a chart

Before you start

A personal Google Account on Google AI Pro or Ultra, age 18+, Keep Activity and Personal Intelligence on. A laptop with Chrome. Copy every prompt from labs/prompts.html, or from the course prompts page: https://tertiarycourses.github.io/C1259-AI-Agents-with-Gemini-Spark/labs/prompts.html

Your mock data

File in data/	What it is
enquiries-export.csv	24 rows of made-up enquiries. One business appears twice, on purpose.
monthly-numbers.csv	Six months of made-up enquiries and discovery calls.

Steps

Step 1. Build the dashboard (9 min)

Where: Gemini → Task, then Google Sheets

Attach both CSV files and paste the prompt.

PROMPT · COPY FROM THE LAB PROMPTS PAGE

```
Create a Google Sheet named Northstar-Launch-Dashboard in my Gemini Spark
Workspace/Northstar folder with three tabs.
Leads: one row per business, merging duplicates, from the enquiries export.
Summary: live formulas counting leads by service and by source, and the average days to
first reply.
Trend: the monthly numbers with a chart of enquiries and discovery calls.
Tell me how many rows you merged and which ones.
```

Expect: 23 leads, because Bukit Bakes appears twice. Trend still shows 24 enquiries, because it counts emails and not businesses.

You decide: Your count must match Spark's. If it says 24, your rule was not followed.

Step 2. Check it like an auditor (6 min)

Where: Google Sheets

Count the rows on Leads yourself. Click into a Summary cell and read the formula. Ask Spark for one change, such as sorting by date, and check nothing else moved.

Expect: Summary cells are formulas, not typed numbers.

Checkpoint

23 leads, live formulas in Summary, and a chart on Trend.

If you finish early, or after class

• Ask Spark where each Summary figure came from, and check one by hand.

If Spark does not behave as described

Menus move and results vary, so this lab states what to expect and not exact wording. Check the source in Google Help, tell your trainer, and record what you actually saw. No Pro or Ultra account in class? Pair with a neighbour and complete the Docs, Sheets and Sites templates by hand.

All company data in this lab (Northstar Studio, people, enquiries, reviews, numbers) is fictional and generated for training.
